

DSL Internet:
Fast, convenient, "always on"

The Digital Subscriber Line (DSL) has transformed the way people work on the Internet. Not long ago, businesses often had to wait for hours for large files to download from the Web or their E-Mail. With DSL, those same files download in a matter of seconds! Hanson Information Systems offers a variety of DSL packages to meet your needs!

- 768K Download/768K Upload**

An explanation of the different types of DSL

ADSL (Asymmetric DSL) — Most of the bandwidth that is available is used to download information or data. A smaller part of the bandwidth is used to send information or data.

SDSL (Symmetric DSL) — the maximum data transmission rate is the same both uploading and downloading.

IDSL (ISDN DSL) — a variation of DSL technology that allows users to employ existing ISDN card technology for data-only use. IDSL has a larger range from the telephone company central office, but has subsequent limitations on bandwidth and speed.

UP TO 50 TIMES FASTER THAN DIAL-UP—LESS EXPENSIVE THAN ISDN OR A T1 LINE
