Server Colocation

Ensuring data safety and availability for your business.

When the need for continuous, uninterrupted service is critical, colocating your servers at our Operations Center may be the best solution. Our goal is to maximize your ability to service your customers and focus on your business's core competencies.

Server colocation with Hanson Information Systems gives you full control. You own or rent the server located at our Operations Center but you remain in control of its management. Our colocation packages include space, electricity, and Internet connectivity.

The more applications you run on your server the better the value to you. Run your website from your collocated server and you enjoy the same security of service as you would with our webhosting services with no extra cost.

Advantages of Colocation include:

- **Enhanced Connectivity**

Our private network backbone enables us to provide high-bandwidth services to our clients with a focus on quality. By peering with other backbone providers via geographically diverse routes, we are able to provide redundant internet connectivity. Our network can route around problems to ensure that your critical business data arrives at its destination intact.

- **Environment**

Your servers will be housed in our environmentally controlled server center to ensure optimum performance. Our data center power is supplied by redundant power sources including, centralized uninterruptible power supply (UPS) battery backup system. In the event of power outage to the building, the UPS is further protected by an auto-start generator capable of operating for 48 hours at full load without refilling.

- **Expert Support Staff**

Your equipment will be monitored 24 hours a day, seven days a week by our expert staff to ensure maximum efficiency and availability.

- **Security**

Your server is housed within our Operations Center and is protected by the same internet and physical security as our own equipment.
