

## Hosting Services

## Website Hosting

***A full range of web hosting services and the technical back up to ensure your presence on the World Wide Web is available 24/7.***

A useful, well-designed Website speaks volumes about your company. Our experienced and professional developers can create a Website that will make your company proud. We have found that everyone has different requirements for their Website. Many companies like the flexibility of a custom designed site, while others prefer the lower development costs of an "off the shelf" solution. Hanson Information Systems will work with you to develop a Website that accomplishes your individual goals while staying within your budget.

### **Hosting Servers and Systems**

Hanson Information Systems offers a full range of Web Site hosting services. Our servers operate across UNIX, Linux and Windows Platforms. Our Web servers are state of the art with built in Firewall and Antivirus protection in addition to redundant capacity to ensure your site will be up and running 24 hours a day 365 days a year. Hosted websites enjoy full access to our corporate standard Internet bandwidth capable of handling millions of hits per hour ensuring your site never seems slow and allowing your customers to enjoy your site at its best.

Prefer to have your own Web server? Hanson Information Systems have dedicated servers and colocation options available. We can also provide full e-Mail and DNS Services.

### **Design**

We have extensive experience in the full range of Web design programs and languages, custom graphics design, SQL database creation, e-commerce site design, and much more. We can also work with third party designers for specialist solutions or content.

Our development team can create a custom Website that works for your business or we can

redesign your existing website to give it a high-quality professional look. We take the existing content from your website and develop a custom design to give your site a visual makeover. You can also add new content or make changes to the existing material. This redesign can provide your business or organization a chance to re-establish itself online as a fresh and innovative player on the world wide web.

Hanson will consult with you to determine the design requirements of your web site. Discussions will cover various aspects of the web site design: general style and approach; overall organization, size and orientation; the strategic goals of the organization or business and the target audience; time scales and costs involved in design and production; the maintenance and servicing of the completed Web site.

### **Development and Web Applications**

Web Applications are programs executed on a web server with the results displayed in a visitor's browser as happens with Web banking or on-line shopping. Many companies improve customer service and the bottom line by offering their business services on the web.

The true power of the Internet lies in utilizing database and file system driven web applications that make business processes efficient for your company. This includes company members, suppliers and customers. Such applications generate great efficiencies when powered by databases and modules that provide targeted information. You tell us your requirements and we will suggest the best solutions from a wide range of options including: Standard HTML; DHTML; SHTML; ASP; PHP; XML; Cold Fusion; Perl; Java; JavaScript; SQL; mySQL; MS Access; Macromedia Flash; animated gif images; banners and logos.
